

Template Example ver. 2

Don Tawanpitak

September 30, 2025

Introduction

This .tex example is based on P'Art's original template but with some modifications.

First, the mini author list (bottom left) can now be as long as needed. The footline will auto-adjust its width accordingly. The same applies for the section part of the footline.

Second, the section page, i.e., page 2, will now auto adjust text position to the center. If that page is not needed, then comment that part in the .tex file.

Third, a new part is added to the .tex file for setting space between, e.g., paragraphs and items. This can be adjusted, or entirely commented, per the author's preferences.
